26. The staff nurse answers the telephone on a medical unit and the caller tells the nurse that he has planted a bomb in the facility. Which actions should the nurse implement? Select all that apply.
1. Do not touch any suspicious object.
2. Call 911, the emergency response system.
3. Try to get the caller to provide additional information.
4. Immediately pull the red emergency wall lever.
5. Write down exactly what the caller says.

148. A client with a known peptic ulcer is admitted to an emergency department after vomiting a large amount of coffee ground emesis. Vital signs are BP: 100/60 mm Hg; P: 100 beats per minute; RR: 24 breaths per minute; and temperature: 99.0°F (37.2°C). Which interventions should a nurse anticipate in the client’s initial collaborative plan of care? Select all that apply.
1. Administering intravenous (IV) fluids
2. Inserting a nasogastric (NG) tube and placing it on suction
3. Having the client sign a consent for emergency surgery
4. Positioning the client in Trendelenburg’s position
5. Administering a proton pump inhibitor
6. Limiting the client’s diet to bland foods only

149. Four hours following an abdominal Nissen fundoplication for repair of a hiatal hernia, a client has yellow-green drainage in the nasogastric (NG) tube and absent bowel sounds. Which actions by the nurse are most appropriate? Select all that apply.
1. Notify the surgeon immediately.
2. Document the findings.
3. Reposition the NG tube.
4. Offer a clear liquid diet.
5. Continue to monitor the client.
